

FOR IMMEDIATE RELEASE

The Future of Sewn Product Manufacturing Starts Here: Registration Opens for Texprocess Americas 2027

From next-generation machinery to the connections driving industry growth, Texprocess Americas returns to Atlanta May 11–13, 2027, bringing innovation, technology, and opportunity together under one roof.

ATLANTA, GA – November 10, 2026 – The machinery is evolving. Production is getting smarter. And the future of sewn product manufacturing is taking shape.

Registration is now open for Texprocess Americas 2027, returning May 11–13, 2027, to the Georgia World Congress Center in Atlanta, Georgia. Co-produced by Messe Frankfurt North America and the Sewn Products Equipment & Suppliers of the Americas (SPESA), the event brings the sewn products industry together for three days of technology, discovery, education, and meaningful business connections.

As manufacturers face increasing pressure to produce faster, operate smarter, and adapt to changing market demands, Texprocess Americas delivers something beyond the latest equipment: direct access to the innovations, expertise, and partnerships that can move their businesses forward.

See the Technology. Meet the Innovators. Discover What's Next.

The future of manufacturing isn't something to watch from the sidelines. It's something to experience.

At Texprocess Americas, the show floor becomes a gateway to what's possible, bringing together equipment manufacturers, technology developers, solution providers, and industry leaders shaping how sewn products are designed, developed, and produced.

From precision cutting and advanced sewing systems to automation, digital solutions, and integrated production technologies, attendees can explore the innovations transforming manufacturing operations and discover how those solutions translate into real-world applications.

Beyond the machinery, it's about the people, ideas, and connections driving the industry forward.

Through live technology demonstrations, expert-led educational opportunities, and conversations with the people behind the innovations, Texprocess Americas creates an environment where ideas become actionable insights and connections open doors to new possibilities.

Whether attendees are looking to modernize production, explore new technologies, improve operational efficiency, or expand their supplier network, the show offers the opportunity to turn manufacturing challenges into opportunities for growth.

One Destination. Two Industries. Endless Possibilities.

What happens when advanced materials meet the technologies that bring them to life?

That connection comes into focus in Atlanta.

Co-located with Techtextil North America, Texprocess Americas brings together two complementary sides of the manufacturing industry for one connected experience.

While Techtextil North America showcases innovations in technical textiles, nonwovens, and advanced materials, Texprocess Americas delivers the machinery, technologies, and production solutions used to transform materials into finished products.

Together, the events create a unique opportunity for attendees to explore the manufacturing process from material innovation to production execution.

For professionals working across apparel, automotive, industrial applications, home furnishings, and technical sewn products, the combined show floor opens the door to new ideas, cross-industry collaboration, and business opportunities that extend beyond a single sector.

Powered by Industry. Built for Progress.

Behind every advancement in sewn-product manufacturing are the companies, technologies, and people driving the industry forward.

As co-producer of Texprocess Americas, SPESA (Sewn Products Equipment & Suppliers of the Americas) brings decades of industry expertise and an extensive network of machinery manufacturers, technology providers, distributors, and supply chain partners to the event.

“At SPESA, we’re focused on helping our members build stronger businesses and making manufacturing better. We see that work in action every day on the show floor at Texprocess Americas,” said SPESA President Michael McDonald. “That’s why we’re so excited to bring the industry together in Atlanta, where our members can share their expertise, build new relationships, and help manufacturers put better technology to work.”

Through education, advocacy, and collaboration, SPESA supports the advancement of the sewn-products industry, helping bridge the gap between the companies developing manufacturing solutions and the businesses adopting them.

This shared commitment is at the heart of the partnership between Messe Frankfurt North America and SPESA. Together, they have established Texprocess Americas as a platform where industry expertise meets practical application, giving manufacturers access to the technologies, insights, and partnerships needed to strengthen operations and prepare for evolving production demands.

The Next Move Starts in Atlanta

Manufacturing doesn't stand still, and neither should the businesses shaping its future.

For three days, Texprocess Americas 2027 will put the industry's next chapter on display, offering attendees the opportunity to see innovation in action, connect with decision makers, and discover solutions that could redefine what's possible for their operations.

The technology is advancing. The industry is connecting. Your next opportunity starts here.

Registration is officially open. Make plans to be part of Texprocess Americas 2027.

About Texprocess Americas
Texprocess Americas is a leading trade exhibition in the Americas for equipment and technology used in the development, sourcing, and production of sewn products. Co-produced by Messe Frankfurt North America and SPESA, the biennial event connects industry professionals with innovative manufacturing solutions, educational opportunities, and business connections. Texprocess Americas is co-located with Techtextil North America.

About SPESA

The Sewn Products Equipment & Suppliers of the Americas (SPESA) is an industry association representing suppliers to the sewn products industry, including manufacturers and distributors of machinery, equipment, technology, systems, parts, and supply chain solutions. Through education, networking, and advocacy, SPESA works to strengthen the industry and support its continued advancement.
